## Project Design Phase-II Technology Stack (Architecture & Stack)

| Date          | 13 August 2025                            |
|---------------|---|
| Team ID       | NM2025TMID12700                           |
| Project Name  | Educational Organisation Using ServiceNow |
| Maximum Marks | 4 Marks                                   |

## **Technical Architecture:**

The architecture focuses on providing a **cloud-based**, **scalable**, **and secure platform** using ServiceNow to streamline student support services, including academic queries, IT helpdesk, and administrative requests. All user interactions, service logic, and database operations are managed through ServiceNow's low-code/no-code framework and integrated technologies

**Table-1: Components & Technologies:** 

| S.No | Component           | Description   | Technology   |
|------|---------------------|---|--|
| 1.   | User Interface      | Web UI and Mobile Portal for students, faculty, and admin                 | ServiceNow Service Portal,<br>HTML/CSS/JavaScript        |
| 2.   | Application Logic-1 | Workflow automation: ticket creation, routing, approval flows             | ServiceNow Flow Designer,<br>Workflow Editor             |
| 3.   | Application Logic-2 | Email/SMS notifications for request updates                               | ServiceNow Notification Engine, Email Scripts            |
| 4.   | Application Logic-3 | Virtual assistant to guide users to knowledge articles and create tickets | ServiceNow Virtual Agent                                 |
| 5.   | Database            | Structured ticket, user profile, and request status data storage          | ServiceNow Configuration Management Database (CMDB)      |
| 6.   | Cloud Database      | Cloud-hosted database service with backup and real-<br>time access        | ServiceNow Cloud Infrastructure, AWS RDS (optional)      |
| 7.   | File Storage        | Attachments for student applications or documentation                     | ServiceNow Attachment Table,<br>Google Drive Integration |
| 8.   | External API-1      | Academic calendar and exam schedule syncing                               | Custom REST APIs or Google<br>Calendar API               |
| 9.   | External API-2      | University identity verification  | Aadhaar API / University ID<br>Validation Service        |

| 10. | Machine Learning<br>Model          | Optional: auto-categorization of service requests or chatbot intent routing | ServiceNow Predictive<br>Intelligence, Azure NLP Model |
|-----|------------------------------------|---|--|
| 11. | Infrastructure<br>(Server / Cloud) | Hosted environment for application and workflow automation                  | ServiceNow SaaS, Hosted via<br>AWS or ServiceNow Cloud |

**Table-2: Application Characteristics:** 

| S.No | Characteristics             | Description  | Technology   |
|------|-----------------------------|--|--|
| 1.   | Open-Source<br>Frameworks   | Styling, responsiveness, and integration tools   | Bootstrap, React, JSON,<br>REST API                            |
| 2.   | Security<br>Implementations | User authentication, access control, and secure communications                                   | OAuth 2.0, SSO, HTTPS,<br>Role-Based Access (RBAC),<br>SHA-256 |
| 3.   | Scalable<br>Architecture    | 3-Tier: UI layer → ServiceNow Workflow Logic → CMDB/Storage, with modular service catalogs       | ServiceNow App Engine<br>Studio                                |
| 4.   | Availability                | 99.9% uptime with failover support, cloud redundancy   | ServiceNow Cloud<br>Infrastructure, Load<br>Balance            |
| 5.   | Performance                 | Optimized for concurrency (1000+ student requests/day), caching and dashboard speed enhancements | ServiceNow Performance<br>Analytics, CDN (optional)            |
